

HOW TO USE OUR COIR GROW BAGS

1. Pierce the top of the Grow Bag, creating holes for planting (3 - 4 holes on 100cm Grow Bag).
2. Add 3-4L lukewarm water and allow for expansion to take place (20-25 minutes). Add more water if needed.
3. Create cavities and plant in each hole, covering with mix from the bag.

PRODUCT DETAILS

- Natural and Biodegradable coir mix used in a polypropylene bag which has been UV stabilised for 2 years.
- Ethically produced and sourced.
- Stable pH levels helps fast and robust root development.
- Retains water, facilitates air porosity, and has good drainage.
- A multipurpose growing medium for hydroponic growing, nurseries, gardens, greenhouses, driveways, lawns, and patios.
- Crafted in Sri Lanka.
